

Collaborative Research Grant Program (CRGP)

FAQ (Frequently Asked Questions)

1. I have an unadjusted project in the Research Grant Program (RGP); can I participate in CRGP?

Sure! You can apply to CRGP while you have an ongoing project in RGP, as CRGP and RGP are entirely separate programs.

2. Is it essential to sign an MoU between collaboration partners before submitting a proposal?

Not really! It is acceptable to us to have a signed declaration of all PI, Co-PIs and their corresponding heads in the CRGP application form (Sec-A). However, it is suggested to have an MoU in between the project duration.

3. Can I collaborate with researchers from outside KU?

Yes. Up to two Co-PIs from other institutions or industries may be included, with clear justifications and relevance to the project's goals.

4. What about collaboration with international entities under CRGP?

Yes, you can! However, international entities cannot have funds overseas, but still, they can contribute. Furthermore, international travel is generally discouraged.

5. Can I collaborate with local NGOs and communities?

That will be phenomenal. As CRGP aims to contribute to real-world problem-orientated research, you can collaborate with local NGOs and communities, especially for social studies. Hence, the collaboration must be reflected in the application process, and one person from that NGO must be on the Co-PI list. Stakeholder engagement, particularly community engagement, is highly encouraged.

6. What about intellectual property (IP) in CRGP?

IP is a valued tool in CRGP for proposal evaluation. Proposals involving probable patent, trademark, or copyright generation will be prioritized for funding.

7. Is there a publication requirement?

Yes. Each project must publish at least one article in a Scopus or Clarivate-indexed journal (minimum impact factor 1.0). Until published, the PI cannot submit or co-submit new proposals to CRGP.

8. What is the typical project duration and funding amount?

Projects typically span 2–3 years. Requested funds may range between BDT 15,00,000 and 25,00,000, justified in detail.

9. Can CRGP-funded projects be submitted for other grants?

No. Dual submission is prohibited. Violators risk ineligibility and must return all received funds.

10. What about the nature of collaboration?

We encourage inter-institution collaboration over intra-institution collaboration in the proposal formulation. Furthermore, collaboration with research organizations, industries, GOs, and NGOs is highly valued. Diverse collaboration of an interdisciplinary nature would be prioritized.

11. Are there any priorities?

We have priorities in the funding procedure. We will emphasize the projects with tangible outcomes, generation of intellectual property (patent, copyright, trademark), stakeholder engagement, and creation of facilities that generate income for the university.
